UTAH TEACHER PREP PROGRAMS RATED IN NCTQ'S 2018 TEACHER PREP REVIEW

RATINGS HIGHLIGHT DISCONNECT between PREPARATION TEACHERS GET and REAL DEMANDS OF TEACHING; LACK of PREP MAY CONTRIBUTE TO FLAT NAEP RESULTS

Washington DC –Today, the National Council on Teacher Quality (NCTQ) releases its [latest ratings for traditional graduate and alternative route programs](#) preparing either elementary or secondary teachers, including three traditional graduate programs and two alternative route programs based in Utah.

Teacher Prep Review results for Utah

Highest ranked elementary program (national percentile out of 194 programs):

- Western Governors University (88th)

Highest ranked secondary program (national percentile out of 406 programs):

- Westminster College (35th)

Programs earn top marks for having strong admission criteria and providing candidates with both the content knowledge and instructional techniques needed to enter the classroom ready to teach. The best programs do more to instill classroom management skills and systematically provide high-quality practice opportunities.

The full list of Utah's graduate and alternative route programs can be found [here](#).

Key Findings for Utah

- Programs' preparation of **elementary teachers** is uneven.
 - One of the two elementary programs reviewed, **Western Governors University**, provides basic instruction in how to teach young children to read. In the national sample, 23 percent do so.
 - Neither program reviewed attends to the specific math content elementary teachers need. Nationally, just 1 percent of programs provide such content, under the mistaken impression that elementary mathematics does not require specialized coursework.

- Only **Western Governors University** adequately screens candidates for content knowledge in science and social studies. Eighteen percent of programs do so nationally.
- **High school teacher preparation** is mixed. Compared to other states, Utah is better in some ways and worse in others.
 - Neither program reviewed in Utah ensures all science and social studies teachers possess adequate content knowledge. Nationally, 36 percent of programs address the need for science and social studies teachers to know multiple subjects through adequate admissions screening or by requiring candidates to complete additional subject area coursework.
 - Both programs reviewed in Utah require aspiring high school teachers to take a course in the best ways to teach their specific subject, which exceeds the national rate of 70 percent.
- With all the emphasis on providing teacher candidates with more and better practice, of the five Utah programs reviewed only **Western Governors University** pays sufficient attention to basic indicators of quality, such as the teaching skills of the classroom mentor and providing regular observations and feedback to each candidate. (The national average is 6 percent.) The need to build classroom management skills is often overlooked, with only about 20 percent (similar to the national rate of 15 percent) of programs adequately verifying the classroom management skills of candidates.

A full analysis of the findings can be found [here](#).

Recommendations: Based on these findings, programs need to take several essential steps to provide stronger training to aspiring teachers.

1. Focus relentlessly on the need for future elementary teachers to be ready to teach reading and math, the two most important aspects of their job.
2. Prescreen applicants to make sure they already know the core content they will teach—or be prepared to prescribe the necessary remediation.
3. Programs should better use student teaching and internships as opportunities to give constructive, targeted feedback on specific classroom management strategies that are found to be universally effective.

“By better aligning teacher preparation with the real demands of teaching, Utah’s teacher prep programs could play a major role in boosting the quality of new teachers in the state and improving learning in schools. What a privilege and opportunity this represents,” commented Kate Walsh, president of the National Council on Teacher Quality. “As the new NAEP results suggest, the status quo in training teachers is simply insufficient for our students’ needs.”
